Subject: Lead Testing Results at Fullerton School District

Dear Mr. Macauley:

Enclosed is a copy of the completed Lead sampling results for the water samples that we collected from January 15, 2018 through March 8, 2018 for all the schools in the district, which are served by City of Fullerton (Attachment A). The sample analysis was performed by the City's contracted laboratory, Clinical Laboratory of San Bernardino, Inc.

The Lead Action Level is 15 micrograms per liter ($\mu\text{g/L}$) and Reporting Detection Limit is 5 $\mu\text{g/L}$. For the lead sampling events just completed, lead was detected below the Action Level in three sample locations. Lead was not detected from all other sample locations. Enclosed is the school district's lead sampling plan for your reference (Attachment B). No further testing is required. However, we recommend taking steps to reduce the lead levels in the three sample locations where lead was detected below the Action Level.

The analytical results for the collected water samples can be located on the laboratory form under the heading titled "Result". The sampling results are indicated in micrograms per liter ($\mu\text{g/L}$). A result of "ND" indicates the constituent was not detected at or above the reporting limit in the water sample. Below is the location description associated with the Sample ID's on the laboratory form:
